

QUEST UNIVERSITY – RECREATION BUILDING Squamish, British Columbia

Project Overview

This is a three-level facility featuring a full-size gymnasium built to NAIA/NCAA Inter-Collegiate specifications.

Other amenities include four squash courts, large fitness facility, change rooms, washrooms and accommodations for the building manager or athletic director. A student club room is included within the complex, as is an outdoor, artificial turf playing field.

Sustainable design lies at the core of the strategy, as evidenced by the use of geothermal technology as the main energy source, distributed throughout the building via a radiant slab system.
